

Recently, **Biolytix AG** signed a service provider agreement with **Affymetrix UK Ltd** (www.affymetrix.com) and offers genomic analysis services for the academic and industrial R&D community under conditions compliant with a stringent quality management system.

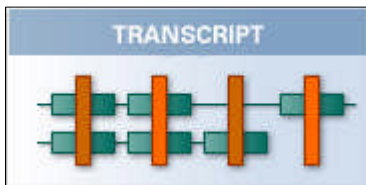

Appointing Biolytix AG as an Affymetrix Authorized Service Provider further enhances the strong reputation of Biolytix AG in the molecular biology service provider community. Current and potential future customers of Biolytix worldwide have now access to Affymetrix offerings via the service provided by the company.

Besides standard gene expression analysis services, with this state-of-the-art equipment Biolytix is ready to offer services using the latest generation GeneChip® products, including Exon and Tiling arrays as well as SNP Genotyping and Gene Mapping Arrays with potential applications in transcriptome mapping, analysis of gene regulation as well as Genome Wide SNP mapping and re-sequencing using Affymetrix standard and custom arrays / assays.

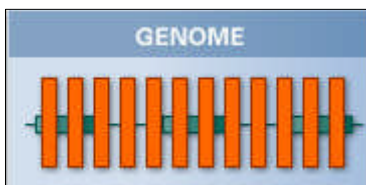

GeneChip® 3' Expression and Gene Arrays:

Accurate, robust and simple analysis of gene-level expression.

GeneChip® Exon Arrays: Alternative splicing and biomarker research at the Exon Level. These arrays provide a genome-wide survey of alternative splicing and gene expression.

GeneChip® Tiling Arrays: Genome-wide understanding and mapping of novel transcripts.

SNP mapping Arrays: Genotyping of a great variety of species.

Extraction of RNA or DNA, analysis of the array on Affymetrix Platform, generation of the report as well as fast and secure data transfer are included in the service.

Bioinformatics data mining is provided through an external partner.

For more detailed information about the Affymetrix GeneChip® Arrays are available at <http://www.affymetrix.com/products/arrays/index.affx>
